

Spill bund Cargo EUR and Cargo DP

The shape and size of the CARGO variant has been specially designed for use in industry and transportation. Unlike the red ET spill bunds the CARGO has a different system for collapsing the corners. The corners are not sealed and so the tarp can easily fold around the pallet that can be handled afterwards by pallet-poolers and forklifts. From a small parcel it is possible within a few seconds to assemble a container with a generous capacity of 210 litres (EUR variant), alternatively 300 litres (DP variant).

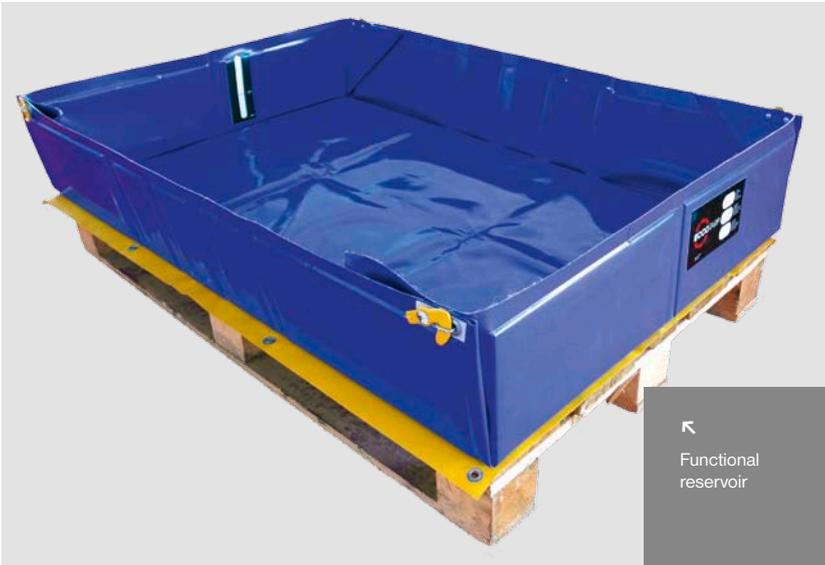

This product is intended for emergency retrieval of industrial liquids, oil-based products and chemicals in case of an accidental spill. It can be used as a protective device when moving pallets loaded with drums or cans. CARGO spill bunds are available in blue in two standard sizes.

Each bund is provided with a level indicator to show the quantity of retrieved liquid. The CARGO bund has lightweight wall reinforcements and functions without the need for steel cables. The manufacturer recommends use of yellow pad to protect the underside of the spill bund against mechanical damage.

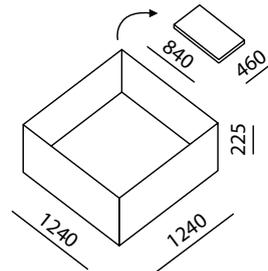

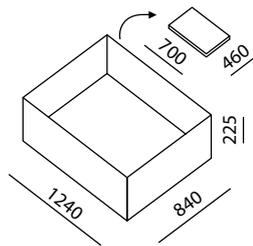

The bunds are rigid and self-supporting. They are made from thick fabric with a protective proofing layer (PES/PVC 680 g/m²). They are resistant to oil-based substances, acids and alkalis at temperatures between -30 and +70°C.
